October 02, 2026

Dear Squarepoint Recruiting Team,

I am applying for the Intern Quant Researcher position (Summer 2027), with New York as my preferred office and Hong Kong and Singapore as strong secondary preferences. I am currently a Master of Engineering student in Financial Engineering at Cornell (graduating December 2027), and I completed my BSc in Mathematics with First Class Honours at the University of Hong Kong this June. My connection to Squarepoint is not new: in April 2026 I was invited by Nicole Liew to interview for the Desk Quant Analyst role, and I withdrew only because my Cornell offer arrived on a conflicting timeline — with the express hope of returning once my Master's was underway. This internship is exactly that return, at exactly the stage your team suggested.

My research experience maps directly onto the role. At Dymon Asia Capital in Hong Kong I predicted Hang Seng Composite and Tech Index constituent changes before official announcements — an 82.6% action-level hit rate (185/224) across three live rebalances — by translating published index methodologies into point-in-time eligibility, liquidity and buffer logic inside an auditable Python pipeline over FactSet, ERD and HKEX filings, with LLM-assisted screening gates. At Rivermap I automated thematic stock selection with a two-stage semantic retrieval system (BGE embeddings, then LLM refinement). With HKU's quant trading team I ran a live Polymarket book: scanning order books, ranking opportunities by expected value, enforcing position limits, and tracking realized P&L; against systematic mispricings above three percentage points.

The role's core — researching and implementing trading ideas inside an automated framework, analyzing large datasets, and understanding exchange microstructure — is a precise description of how I already work, and Squarepoint's multi-office platform is where I want to build my career. I am available for interviews at any time and can start in June 2027.

Sincerely,

Jing Xiang Xu
