September 26, 2026

Dear Bank of America Recruiting Team,

I am writing to apply for the Global Quantitative Strategies Summer Associate Program 2027 in Hong Kong. I am a Master of Engineering student in Financial Engineering at Cornell University (graduating December 2027) and hold a First Class Honours BSc in Mathematics with a Computer Science minor from the University of Hong Kong, making this my penultimate summer and Hong Kong my home base.

At Dymon Asia Capital in Hong Kong I built the quantitative machinery your strategists use daily: I reverse-engineered the Hang Seng Composite and Tech Index rebalancing methodologies into point-in-time eligibility, liquidity and buffer-selection logic, and delivered an auditable Python pipeline across FactSet, ERD and HKEX filings that achieved an 82.6% action-level hit rate on three live rebalances. Earlier roles at Nine Martingale and Northeast Securities added factor backtesting, Barra exposure analysis, and Monte Carlo risk-parity optimization — the modeling toolkit BofA GQS applies to derivatives, electronic markets and risk analytics.

I fit the program's stated profile directly: object-oriented programming in Python and C++; hands-on AI/ML experience (embedding-based retrieval and LLM-assisted research pipelines in production internships); a Mathematics degree with CS minor from HKU now deepened by Cornell financial engineering; and native Mandarin on top of fluent English — the additional Asian language the posting flags as advantageous, and daily currency for covering APAC markets from Hong Kong.

What draws me to GQS specifically is the chance to work at the intersection of quantitative research and client-facing solutions in APAC markets I already know deeply, within a bank whose Hong Kong franchise sits at the center of regional capital flows.

I would welcome the opportunity to discuss how my background can contribute to your team, and I am available for interviews at any time. Thank you for your consideration.

Sincerely,

Jing Xiang Xu
