Applying: Quantitative Research Intern 2027, Hong Kong · Penultimate-year Master's student graduating Dec 2027

EDUCATION

Cornell University, College of Engineering, Ithaca, NY — Master of Engineering, Financial Engineering (Expected Dec 2027)
The University of Hong Kong — BSc Mathematics, Minor in Computer Science, First Class Honours, GPA 3.74/4.0 (Jun 2026)
University of Oxford — Visiting Student in Mathematics, ROA scholarship (Jul 2025)

SKILLS

Quantitative: systematic alpha research, index rebalancing prediction (Hang Seng family), point-in-time backtesting, factor models (Barra), performance attribution | Technical: Python (pandas, numpy), C++, R, SQL, Linux, Git | AI/ML: embedding-based retrieval (BGE), LLM pipelines (DeepSeek), fine-tuning workflows | Languages: Mandarin (native), English (fluent)

EXPERIENCE

Quantitative Researcher — Dymon Asia Capital (HK) Ltd, Hong Kong May – Aug 2026

- Researched Hang Seng Composite & Tech Index rebalancing rules to predict constituent additions/deletions before official announcements; translated published methodologies into point-in-time eligibility, liquidity, market-cap and buffer-selection logic.
- Built an auditable ranked-waterfall Python pipeline integrating FactSet, ERD and HKEX filings, with DeepSeek-assisted Theme/Innovation gates and a filing-based free-float engine mapping shareholder evidence to the ten HSIL categories.
- Achieved an 82.6% action-level hit rate (185/224 additions and deletions) across the latest three HSCI rebalances in leakage-controlled, point-in-time evaluation.

Quantitative Researcher Intern — Rivermap Company Ltd, Hong Kong Feb – Apr 2026

- Automated thematic stock selection by translating unstructured investment themes into supply-chain dimensions mapped to proprietary sector taxonomy.
- Built a Python/pandas pipeline integrating sector, revenue-segment and company-description data with auditable intermediate outputs and relevance diagnostics.
- Designed a two-stage semantic retrieval pipeline (BGE embeddings + cosine similarity, then DeepSeek-based refinement) for ambiguous theme queries.

Quantitative Strategy Analyst Intern — Nine Martingale Investment Management, Shanghai Jul – Sep 2025

- Identified a 60-day dividend-event data lag and corrected factor alignment, raising information coefficient by 0.02.
- Built a factor-backtesting framework improving annualized return by 6% and Sharpe ratio by 0.3 over five years.
- Analyzed daily exposures to 10 Barra style factors to characterize signals and style tilts.

Quantitative Strategy Analyst Intern — Northeast Securities Co., Ltd, Shanghai Jul – Sep 2024

- Developed mean–variance and risk-parity models within a 15-year daily-rebalanced backtesting framework.
- Implemented a Monte Carlo approach approximating equal-risk-contribution weights by minimizing asset risk-contribution differences.

PROJECTS & RESEARCH

Researcher — HKU Quant Trading Team, Hong Kong Feb – Aug 2026

- Analyzed historical Polymarket data for systematic price-vs-outcome gaps; grouped contracts by topic, structure and time to resolution; flagged Yes/No shares with pricing gaps above 3 percentage points.
- Built a Python pipeline scanning live markets, ranking opportunities, enforcing position limits, simulating/submitting orders via the Polymarket order book, and tracking realized P&L.

Independent Researcher — University of Oxford, Oxford, UK Jan – Jun 2025

- Modeled Lightning Network channel management as a discounted MDP; derived optimal routing, liquidity-reset and channel-capacity policies under stochastic payment flows.
- Implemented value iteration for discrete and exponential payment distributions, showing bidirectional flows naturally rebalance liquidity.
