Hong Kong · jx466@cornell.edu · +852 6810 9521 (HK) · IANG visa, valid through 30 July 2028

October 31, 2026

Dear Recruiting Team,

I am writing to apply for the Quantitative Researcher Intern (2026/2027) in Hong Kong. I am a Master of Engineering student in Financial Engineering at Cornell University (graduating December 2027) and hold a First Class Honours BSc in Mathematics with a Computer Science minor from the University of Hong Kong, making this my penultimate summer. Hong Kong is my home base and I hold an IANG visa with unrestricted work rights through July 2028.

TSY Capital applies machine learning to inefficiencies across global equity markets — that is precisely how I have worked in every role so far. At Nine Martingale I built a five-year factor-backtesting framework that improved annualized return by 6% and Sharpe ratio by 0.3, and analyzed daily exposures across ten Barra style factors; I also diagnosed and repaired a 60-day dividend-event data lag, lifting information coefficient by 0.02 — the kind of data-integrity work that determines whether an ML pipeline learns signal or noise.

My machine learning is production, not coursework: at Rivermap (Hong Kong) I designed a two-stage semantic retrieval system (BGE embeddings with cosine similarity, then LLM-based refinement) for automated thematic stock selection, and at Dymon Asia I built an LLM-assisted screening pipeline over FactSet, ERD and HKEX filings. A first-class honours mathematics degree from HKU and Cornell financial engineering supply the theory underneath. Based in Hong Kong with an IANG visa, I can start immediately after this internship cycle and grow with a young, ambitious team.

I would welcome the opportunity to discuss how my background can contribute to your team, and I am available for interviews at any time. Thank you for your consideration.

Sincerely,
Jing Xiang Xu
