October 31, 2026

Dear Recruiting Team,

I am writing to apply for the Quantitative Researcher Intern (Bachelor's or Master's), Hong Kong in Hong Kong. I am a Master of Engineering student in Financial Engineering at Cornell University (graduating December 2027) and hold a First Class Honours BSc in Mathematics with a Computer Science minor from the University of Hong Kong, making this my penultimate summer. Hong Kong is my home base and I hold an IANG visa with unrestricted work rights through July 2028.

Tower researches mid- to high-frequency trading algorithms from market data and microstructure — my closest experience to date is exactly that loop. With the HKU Quant Trading Team I built a Python pipeline that scans live Polymarket order books, ranks opportunities by expected value, enforces position limits, submits orders and tracks realized P&L; — signal discovery, sizing and execution in one system. At Dymon Asia I reverse-engineered Hang Seng index rebalancing rules to predict the predictable flows they create, achieving an 82.6% action-level hit rate across three live reconstitutions using only public filings.

I meet the stated qualifications directly: mathematics major with CS minor (First Class Honours, HKU), now in Cornell's financial engineering program; proficient in Python with pandas/NumPy and working knowledge of C++; Linux as my daily research environment. I trade and study markets constantly — prediction markets taught me to treat every price as a probability to be beaten with better data, which is the same instinct your simulators and calibration tools formalize.

I would welcome the opportunity to discuss how my background can contribute to your team, and I am available for interviews at any time. Thank you for your consideration.

Sincerely,
Jing Xiang Xu
