Jing Xiang Xu

jx466@cornell.edu 115 S Quarry St., Ithaca, NY 14850 +852 6810 9521 / 607-882-5108
Authorized to work in Hong Kong: IANG visa (valid through 30 July 2028)

EDUCATION

Cornell University, College of Engineering, Ithaca, NY
Master of Engineering in Financial Engineering **Expected December 2027**

The University of Hong Kong, Hong Kong
Bachelor of Science in Mathematics with a Minor in Computer Science, **First Class Honors**, **GPA: 3.74** **June 2026**

University of Oxford, Oxford, United Kingdom
Visiting Student Program in Mathematics (ROA scholarship) **July 2025**
Selected Coursework: Data Structures and Algorithms, Convex Optimization, Machine Learning

SKILLS

Technical: Python, C++, R, SQL, Shell scripting, Git, Linux
Quantitative: Index Rebalancing, Backtesting
AI/ML: Prompt engineering, DeepSeek-based classification and reranking, fine-tuning workflows, loop engineering

EXPERIENCE

Quantitative Researcher, *Dymon Asia Capital (HK) Limited*, Hong Kong **May to Aug. 2026**

- Researched Hang Seng Composite and Tech Index rebalancing rules to anticipate constituent additions and exclusions before official announcements, modeling the predictable index-driven flows they create via point-in-time eligibility and buffer rules.
- Designed an auditable Python pipeline integrating FactSet, ERD and HKEX filings with LLM-assisted screening gates, hard-coding selection rules into repeatable, deadline-critical production logic.
- Achieved an 82.6% action-level hit rate (185 of 224 additions and deletions) across three live rebalances in leakage-controlled evaluation, monetizable ahead of reconstitution dates.

Quantitative Researcher Intern, *Rivermap Company Limited*, Hong Kong **Feb. to Apr. 2026**

- Automated thematic stock selection by translating unstructured investment themes into supply-chain dimensions mapped to a proprietary taxonomy, expanding the tradeable universe per theme.
- Built a Python/Pandas pipeline integrating sector, revenue-segment and company-description data with relevance diagnostics for rapid idea iteration.
- Designed a two-stage semantic retrieval pipeline (BGE embeddings plus LLM refinement) for fast, ambiguous-theme candidate generation.

Quantitative Strategy Analyst Intern, *Nine Martingale Investment Management, Ltd.*, Shanghai **July to Sep. 2025**

- Identified a 60-day dividend-event data lag and corrected factor timing, raising information coefficient by 0.02.
- Built a factor-backtesting framework; improved annualized return by 6% and Sharpe ratio by 0.3 over five years.
- Analyzed daily exposures to 10 Barra style factors to manage signal crowding and unwanted style risk.

Quantitative Strategy Analyst Intern, *Northeast Securities Co., Ltd.*, Shanghai **July to Sep. 2024**

- Developed mean-variance and risk-parity models within a 15-year daily-rebalanced backtesting framework.
- Implemented a Monte Carlo method approximating ERC weights by minimizing asset risk-contribution gaps.

PROJECTS

Researcher, *HKU Quant Trading Team*, Hong Kong **Feb. to Aug. 2026**

- Analyzed historical Polymarket data for systematic mispricings between market prices and realized outcomes, grouping contracts by topic, structure and time to resolution; flagged Yes/No shares with edges above 3 percentage points and refreshed estimates monthly.
- Built a Python pipeline that scanned live order books, ranked opportunities by expected value, enforced position limits, simulated or submitted orders, and tracked realized P&L.

Independent Researcher, *University of Oxford*, Oxford, United Kingdom **Jan. to June 2025**

- Modeled Lightning Network channel management as a discounted MDP, deriving optimal routing, liquidity-reset and capacity policies under stochastic payment flows.
- Implemented value iteration for discrete and exponential payment distributions, showing bidirectional flows naturally rebalance liquidity and remove costly resets.

ACTIVITIES/INTERESTS

HKU Young Scientist Scheme; F1 racing; Texas Hold'em poker; running
